

## AmpAdder

- Fully compatible with the tvLINK system.
- Provides unity gain when installing a second Global signal booster/amplifier.
- F connector fittings for easy installation.

### Product Description

The Amp Adder is designed to increase the number of outputs on a Global signal booster/distribution amplifier beyond it's existing maximum.

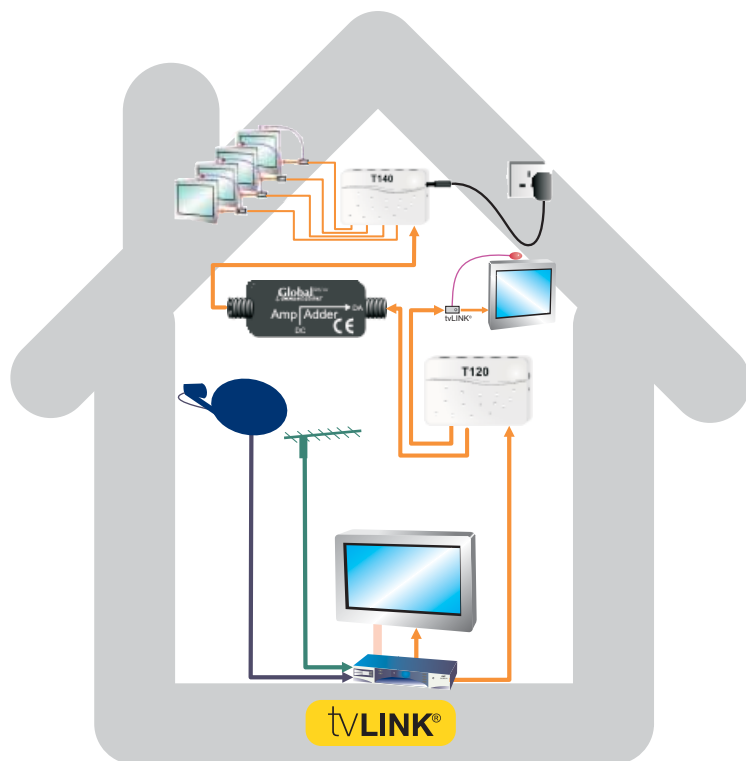

It is installed between one of the outputs of the existing Global Amplifier, or LoftBox, and the input of a second Global Amplifier/signal booster.

The Amp Adder ensures unity gain across all outputs of both the first and the second signal booster/amplifiers, whilst maintaining the correct IR return path for the tvLINK®.

When installing a second Global signal booster/amplifier, it must be powered using a Global power pack (*sold separately*). This may be achieved by either connecting directly into the second amplifiers 'DC IN' socket, or via the Amp Adder itself.

When installing Global equipment and to guarantee total satisfaction and reliability please ensure only genuine, Global manufactured, tvLINK® products are used.

**Extend your Global Distribution System  
Beyond it's Existing Maximum  
with the Global Amp Adder**

### Product Range

tvLINK , 2/4WayDA/F, 2WayDA/Ext, T120, 140 & 180 Diplexers, Bypass Kit, Loftbox, Wallplates
